

Quatrefoil

Rule Book

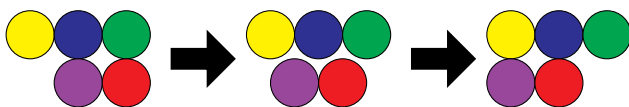

Michael Purcell

Version 0.1

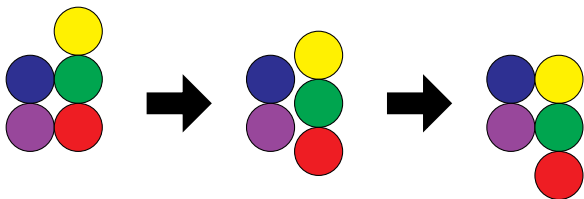

Player Turns

On your turn you must take one *action*:

Push – Place the free token next to any row or column of the quatrefoil. Slide that entire row or column by pushing on the free token until it is part of the quatrefoil.

Pushing the free token into a row.

Pushing the free token into a column.

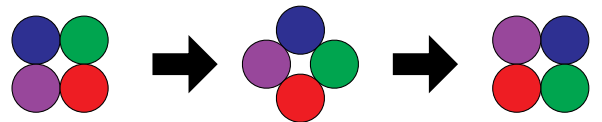

Notice that this will also eject a token from the quatrefoil. The ejected token becomes the free token for the next player's turn.

Version 0.1

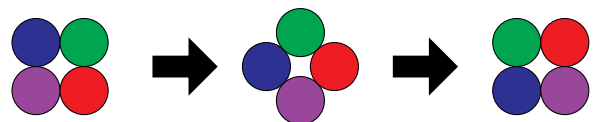

Another way to play is to reveal the solution to the puzzle up front, but limit what actions each player can take. To play this way, set up the tokens in the middle of the play area, deal one position card to each player, and place one colour card near the quatrefoil as normal. Then, deal the remaining colour cards face up in a square near the quatrefoil. These four cards specify the correct position for each token. During the game, anyone can take an action at any time. You may take the twist or stack actions as normal. You may only take a push action that concludes with the free token in the position indicated on your position card. You may only communicate via your actions. The game ends when anyone takes the stack action. Everyone wins if all of the tokens are in their correct positions. Otherwise, everyone loses. For an additional challenge, start a two-minute timer immediately after dealing the last card. Try to solve the puzzle before time expires.

Quatrefoil Dual

Twist – Rotate the quatrefoil by ninety degrees in either direction (clockwise or anticlockwise).

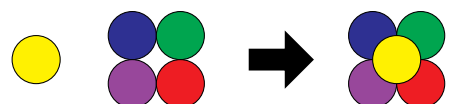

Twisting the quatrefoil clockwise.

Twisting the quatrefoil anticlockwise.

Stack – Place the free token on top of the quatrefoil. The game ends immediately after any player takes this action.

Stacking the free token on the quatrefoil.

Version 0.1

Race the Clock – As in the base game, deal all of the colour cards and position cards face down. After you look at your cards, start a two-minute timer. Try to solve the puzzle before time expires. This is a good variant to try when you have mastered the basic game and want a tougher challenge.

Half and Half – Pick either colour cards or position cards face down. Try to solve the puzzle in as few moves as possible. This is a good variant to try when playing with all cards face up gets too easy.

Nothing to Hide – Turn all of the colour cards and position cards face up. Try to solve the puzzle in as few moves as possible. This is a good variant to try when you are first learning how to play.

There are several ways to modify the rules of the game to adjust its difficulty:

Variants

The game ends when anyone takes the stack action. Everyone wins if all of the tokens are in their correct positions when the game ends. If any token is not in its correct position, then everyone loses.

Winning the Game

Turn Order

Play proceeds to the left (clockwise). That is, after you finish your turn the player to your left will go next.

Correct Positions

The colour cards and the position cards together specify the correct position for each token.

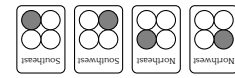

The correct positions of four of the tokens are specified by the cards held by the players. These tokens should be in the *quatrefoil*. Your position card specifies the correct position in the *quatrefoil* for the token specified by your colour card.

The remaining token should be the free token. Because it should not be in the *quatrefoil*, it does not have an associated position card.

Communication

During the game, communication between players is strictly limited. At any time, you may only indicate whether your token is in the correct position or not.

This should be done using a simple nonverbal signal. Many players like to give a “thumbs up” gesture when their token is in the correct position.

Position Cards (4) – One for each of the ordinal directions: northwest, northeast, southwest, southeast.

Colour Cards (5) – One for each colour.

Tokens (5) – One circular token in five colours: blue, green, purple, red, yellow.

Components

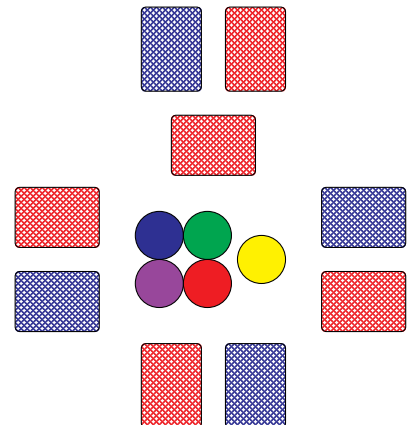

You can end the game whenever you think that you have solved the puzzle. If you are right, then everyone wins. If not, then everyone loses.

During the game, you will work together to solve a puzzle. Communication is limited, however, so you will need to be creative and attentive to effectively coordinate your efforts.

Overview

Set Up

1. Arrange four of the tokens in a square in the play area. This is the *quatrefoil*. The fifth token is the *free token* and should be placed nearby.
2. Deal one colour card and one position card face down to each player. You may look at your own cards, but not those dealt to other players.
3. Place the remaining colour card face down in the play area to one side of the *quatrefoil*. This card indicates which direction is *north*.

The play area after set up is complete.
